

### **Notice to Patients**

The Women's Care Florida (WCF) Laboratory provides expert pathology analysis and complete continuity of care for our patients. Only Board-Certified Pathologists with specialty expertise and fellowship training in Gynecological & Breast Pathology will be diagnosing your tissue biopsy. We also perform molecular testing for infectious diseases.

The results will be available to your OB/GYN immediately after the specimens are processed, usually within 48 hours of your procedure. When necessary, there is direct communication between your OB/GYN and our Pathologists.

You may receive a billing statement after your Insurer has processed your insurance claim just as you would if your specimen was sent to any laboratory. These charges are separate from your OB/GYN visit charges and may be subject to deductibles and/or co-insurance based on your insurance coverage and benefits.

In rare cases where multiple specimen types are obtained by your OB/GYN, and one comes to the WCF Laboratory and the other(s) go to a commercial laboratory, you may receive a statement for the amount that is patient responsibility from two different laboratories.

For questions regarding the billing for laboratory services please contact us at 813-286-0033, option 3 or by email at [BillingSystems@WomensCareFL.com](mailto:BillingSystems@WomensCareFL.com).
